Protect Your Investments

Got Rust? Don't worry, everyone does. **HinderRUST** forms a protective barrier between metals, air, and moisture and stops rust in its tracks while preventing new rust from forming. Also use **HinderRUST** on nuts and bolts for lubrication and to keep them from stripping or shearing off.

Keep engines running efficiently with **Tufoil Engine Treatment**. Tufoil helps with cold weather starting and makes engines run more efficiently, produce more power, and run smoother and cooler. Helps reduce time between oil changes and make engines last longer.

LOX-8 Thread Sealant stops leaks caused by harsh chemicals such as anhydrous ammonia and other fertilizers or pesticides. **LOX-8** survives in environments where other sealants and greases disintegrate.

Protect your investments with the help of Fluoramics products!

Rust Stopper and Lubricant

HinderRUST is an anti-rust and corrosion lubricant that works well in both hot and cold conditions. **HinderRUST**'s formula is perfect for year-round protection and lubrication on metals susceptible to changing weather conditions. It prevents rust, corrosion, and the need to grind or replace metals, thereby prolonging the use of your equipment.

Tufoil — a lubricant without rival

Certified by the Guinness Book of Records as the World's Most Efficient Lubricant, **Tufoil Engine Treatment** is both an engine treatment and an incredibly effective gearbox lubricant when mixed with wheel bearing or chassis greases.

Be Safe — use a thread sealant certified for aggressive chemicals

Why take chances when it comes to threaded connections on fertilizers and pesticides? **LOX-8 Thread Sealant** is compatible with most harsh gases and chemicals including anhydrous ammonia, nitrogen, gasoline, and diesel fuel. **LOX-8** is also available as **LOX-8 Lubricant** which provides superior performance in environments where other lubricants won't survive.
